

MARIADB PLATFORM MANAGED SERVICE

MariaDB Platform in the cloud, your way.

The MariaDB Platform Managed Service allows enterprise organizations to get the benefits of a cloud database without sacrificing everything mission-critical applications expect from a database on premises, including enterprise features, custom configuration, on-demand upgrades and critical bug fixes/security patches.

BACKED BY EXPERTS

The MariaDB Platform Managed Service is backed MariaDB's Enterprise Architect, Remote DBA and Cloud Architect teams – all certified, all MariaDB experts. There is no one better when it comes to MariaDB. Together, these experts will create a reference database architecture based on customer requirements, implement it and provide ongoing maintenance and management.

FULLY MANAGED

The MariaDB Platform Managed Service provides enterprise customers with full database management in the cloud, and a level of support Amazon and Microsoft cannot reach. MariaDB will handle everything from initial configuration to on premises database migration to database upgrades, and provide customers with both technical as well as consultative support.

PROACTIVE CARE

The MariaDB Platform Managed Service does not end with provisioning, unlike AWS RDS/Aurora and Microsoft Azure for MariaDB. MariaDB provides enterprise customers with ongoing database maintenance, management and advice, including backup monitoring, performance tuning, security audits and database upgrades – and if requested, apply schema changes and query optimizations.

WHAT'S INCLUDED?

- Reference architecture design
- Database installation
- Database configuration
- Backup configuration
- Database recovery
- Security audits
- Performance audits
- Performance tuning
- Query optimization
- Schema changes
- Database upgrades
- Database migration

And more...

	Amazon RDS	Amazon Aurora	MariaDB Platform Managed Service
Installation	Yes	Yes	Yes
Configuration	Yes	Yes	Yes
Scheduled backups	Yes	Yes	Yes
Multi-master	No	Preview	Yes
Read replicas	5	15	Unlimited
Sharding	No	No	Yes
Columnar storage	No	No	Yes
Database firewall	No	No	Yes
Dynamic data masking	No	No	Yes
Change-data-capture streams	No	No	Yes
Kafka connector	No	No	Yes
Zero-downtime upgrades	No	No	Yes
Zero-downtime failover	No	No	Yes
Zero-downtime scaling	No	No	Yes
Long-term support	No	No	Yes
Technical database support	No	No	Yes
Consultative database support	No	No	Yes
Bug fixes and security patches	No	No	Yes
