

DATABASE TRAINING SERVICES FROM MARIADB

Expert Guidance to Boost Your Database Skills

BOLSTER YOUR IT TEAM'S KNOWLEDGE WITH HANDS-ON TRAINING

Your goal is to not have to outsource your database expertise for the long term. As you ramp up your project, you'll endeavor to get your team up to speed on best practices, techniques and strategies for a successful implementation as well as ongoing management and troubleshooting.

MariaDB offers a range of comprehensive and flexible training options so that your team can learn the way it learns best: live online training, self-paced online training, private online training and on-site training. With up-to-date materials and hands-on lab exercises always at your fingertips, MariaDB's training services allow you to customize your team's education and expedite a deep level of in-house IT knowledge to help you optimize database and application performance and get the most ROI from your deployment.

MARIADB TRAINING SERVICES

Designed for DBAs, IT professionals, and application developers, our training is created and delivered by the same team of database experts who built MariaDB in the first place. With a variety of options from online training to on-site classes at your facility, participants will learn how to implement and manage MariaDB, build applications, improve database performance, ensure high availability and manage complex tasks like clustering. We also offer certification testing for DBAs interested in becoming go-to experts in MariaDB.

I really enjoyed the MariaDB Training and I'm looking forward to the next one. The course was a perfect mix of theory, demo and hands-on experience.

- Harry Dijkstra,
Senior Database Specialist, CCV Group

MARIADB TRAINING OPTIONS

Live Online Training

Interactive, live online database training with an expert instructor includes classes for DBAs, IT experts and developers on subjects such as Enterprise Cluster Administration, High Availability Training and DBA Training for both U.S. and European audiences. Space in any module can be reserved online.

Online Self-Paced Training

Pre-recorded versions of our instructor-led database training presentations give you the flexibility to learn at your own pace. Online access is available at any time.

Private Online Training

Instructor-led online database training can be customized to your specific needs and delivered live online via one of MariaDB's resident experts.

On-Site Training

Private, one-on-one instructor-led training is also available on site, with a dedicated MariaDB and MySQL expert at your location.

ONLINE TRAINING COURSES

Our online training courses are available live with an expert instructor or pre-recorded so that you can learn in an independent, self-paced way. Courses include:

MariaDB Enterprise Cluster Administration

Learn everything you need to set up and run a highly available, multi-master cluster using Galera. Includes training on the basics of Galera architecture and functionality as well as more advanced techniques for configuring and administering a Galera cluster.

MariaDB for DBAs

The essentials of the DBA trade, including how to extend your skill set to all aspects of administering MariaDB. Covers MariaDB concepts, essential tools and use of resources available for databases, as well as a thorough review of core administrative tasks such as backups and restoration, monitoring and maintaining databases and user security.

MariaDB for Developers

Everything you need to learn to develop MariaDB databases, from the basics to more advanced usage of MariaDB features and capabilities. Learn to design tables well with the right storage engines, write basic SQL statements and queries for MariaDB databases, use MariaDB functions and syntax efficiently and more.

MariaDB High Availability

Tailored for the skilled database administrator, this class helps ensure high availability for mission-critical databases that can't afford downtime. It teaches strategies for achieving high availability with MariaDB, from standard replication to MariaDB Enterprise Cluster, as well as a MaxScale primer.

MariaDB MaxScale

For skilled database administrators, this class is a deep dive into how to install and use MariaDB MaxScale to manage a cluster of database servers. Learn how to configure MaxScale to split database traffic between servers for load balancing, how to automatically replace a failed master server, and how to stream large amounts of data to other applications like Hadoop.

MariaDB Performance Tuning

Gain a deep understanding of advanced MariaDB features and enhancements for delivering the highest database performance. Learn the latest optimization tips and techniques such as optimizing queries, identifying bottlenecks and utilizing caches.
